December 10, 2018

1 Global Trends

This Appendix features the box plots for each country divided by place of residence and by dependent variable. They show the location of the minimum, first quartile, median, third quartile and maximum scores for each place based on both self-placement ideology and the liberalism/issue stances dependent variable. The definitions for each place identifier coincides with the identifiers used in the CSES such that

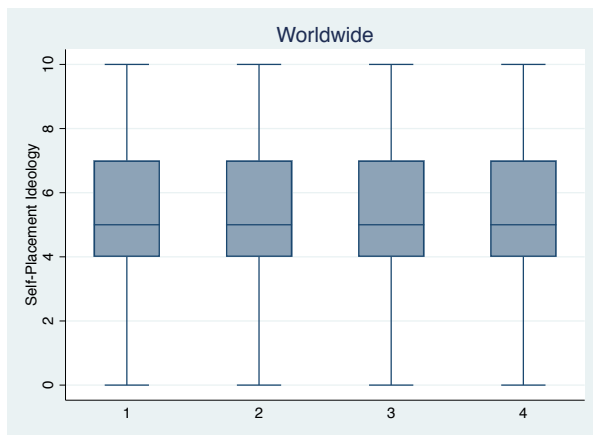

1 = Rural Village

2 = Small Town

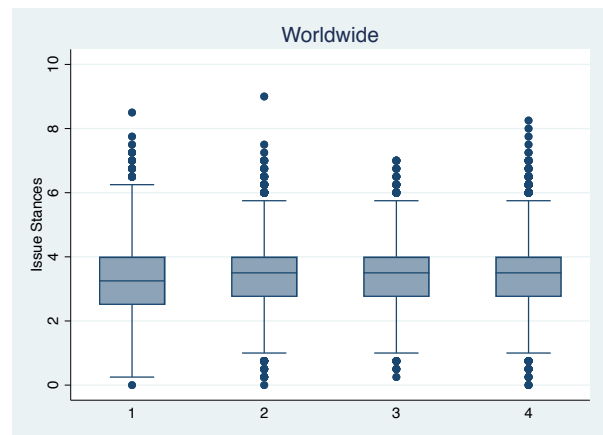

3 = Suburban City

4 = Urban City

Each box-plot is labeled with a caption to identify the dependent variable that is used to create the data.

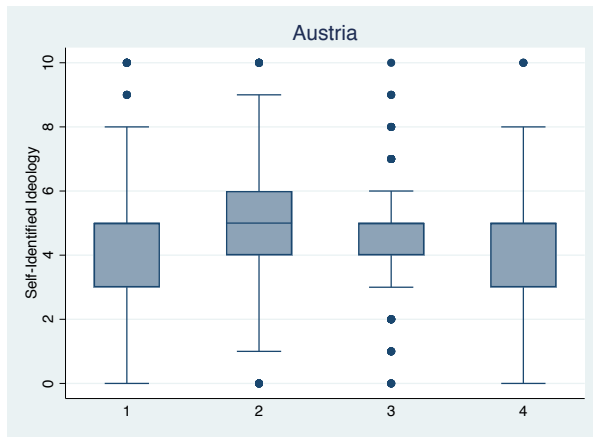

(a) Self-Placement Ideology

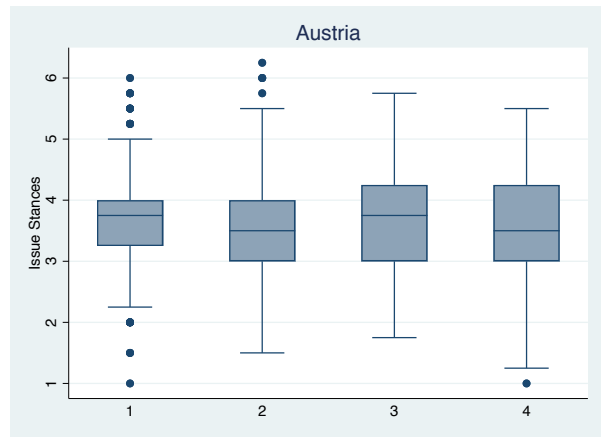

(b) Issue Stances
