1 Residual Plots for General Trends

For the general model, the regressions that were ran used the following code:

```
regress ideology i.place gender age education ses partyid closeness religion  
regress liberalism i.place gender age education ses partyid closeness religion
```

The Residual versus Fitted plots for the models are as follows:

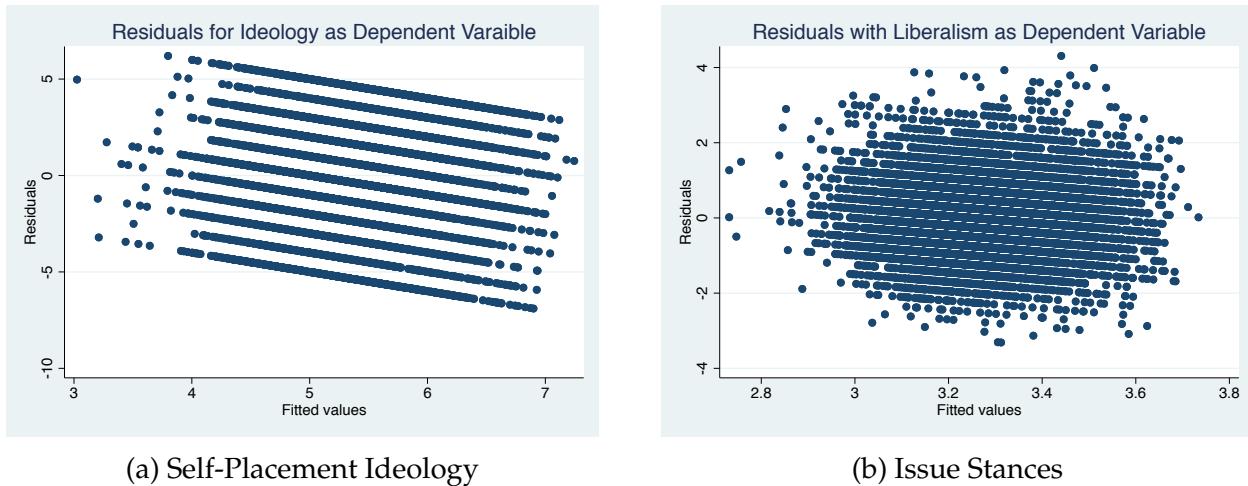

Figure 1: Residual Plots for Individual-Level Responses

For the inclusion of all countries and their macro variables, the following regression commands are used:

```
regress ideology i.place democracy electformula regimeage freedomhouse corruption  
gender age education ses partyid closeness religion  
regress liberalism i.place democracy electformyla regimeage freedomhouse  
corruption gender age education ses partyid closeness religion
```
